Abstract

5

When there is no wheelchair to be transported in
a vehicle with a load surface that has been lowered
relative to the vehicle floor to take a wheelchair and
pivotally connected to the outer end of which is a ramp
10 that can be lowered from a secured upright position
towards the roadway to assist movement, once an
associated door has been opened, the ramp can be lowered
towards the load surface until the ramp forms one surface
with the higher vehicle floor.
